Lecture II Learning Objectives

☐ To understand the elements of an Expert System

(ES):

Assignment Project Exam Help

<https://powcoder.com>

☐ To understand Inference principles of an ES;

Add WeChat powcoder

☐ To understand the principles Distributed AI;

☐ To understand the definition of Agent

☐ To understand the differences of Agency

Assignment Project Exam Help

Anatomy of an Expert System

<https://powcoder.com>

Add WeChat powcoder

Anatomy of An Expert System

Expert systems start with some **initial state** relating to a problem domain which they combine with **general rules** about how **additional state** information can be derived from the current state.

Anatomy of An Expert System

Expert systems start with some initial state relating to a problem domain which they combine with general rules about how additional state information can be derived from the current state.

Assignment Project Exam Help

<https://powcoder.com>

The data base holds the initial state, typically in the form of **facts** about the problem domain:

e.g. for a weather system, this might be:

LOW_PRESSURE
CLOUDY
COLD

Anatomy of An Expert System

Expert systems start with some **initial state** relating to a problem domain which they combine with **general rules** (represent the expertise knowledge as data or rules) about how **additional state** information can be derived from the current state

The rule base describes how additional state can be derived from existing state.

<https://powcoder.com>
Add WeChat powcoder

e.g. for a weather system, this might be:

IF LOW_PRESSURE & CLOUDY
THEN RAIN_LIKELY

IF HIGH_PRESSURE & NOT CLOUDY
THEN RAIN_UNLIKELY

Anatomy of An Expert System

Expert systems start with some **initial state** relating to a problem domain which they combine with **general rules** (represent the expertise knowledge as data or rules) about how **additional state** information can be derived from the current state

Assignment Project Exam Help

Rules are known as **production rules**.

<https://powcoder.com>

Add WeChat powcoder

ANTECEDENT >-----> CONSEQUENT

e.g.

HOT & SUNNY >-----> GOOD DAY

The rule base is typically **ordered**.

Anatomy of An Expert System

Expert systems start with some **initial state** relating to a problem domain which they combine with **general rules** (represent the expertise knowledge as data or rules) about how **additional state** information can be derived from the current state

Assignment Project Exam Help

Some systems include <https://powcoder.com> **certainty factors**:

Add WeChat powcoder

ANTECEDENT >---X---> CONSEQUENT

e.g.

HOT & SUNNY >--0.8--> GOOD DAY

It is 80% certain that it will be a good day if it is hot and sunny.

Anatomy of An Expert System

Expert systems start with some **initial state** relating to a problem domain which they combine with **general rules** about how **additional state** information can be derived from the current state.

The inference engine is the procedural part that actually applies the rules to generate additional state:

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

- 1) **Forwards Chaining** inference engines generate all the consequences of the initial state.
- 2) **Backwards Chaining** inference engines are query oriented – i.e. based on the initial state and rule base, is the following fact true?

Anatomy of An Expert System

- Expert systems start with some **initial state** relating to a problem domain which they combine with **general rules** about how **additional state** information can be derived from the current state.

Forwards Chaining:

<https://powcoder.com>

The inference engine repeatedly *selects* a rule and *updates* the database.

If the update does not add new state, the rule is ignored until an update occurs.

If none of the rules add new state, then the inference engine terminates.

Anatomy of An Expert System

- Expert systems start with some **initial state** relating to a problem domain which they combine with **general rules** about how **additional state** information can be derived from the current state.

Forwards Chaining:

Assignment Project Exam Help

LOW_PRESSURE <https://powcoder.com>

CLOUDY

COLD

RAIN_LIKELY

Add WeChat powcoder

IF LOW_PRESSURE & CLOUDY

THEN RAIN_LIKELY

IF HIGH_PRESSURE & NOT CLOUDY

THEN RAIN_UNLIKELY

Anatomy of An Expert System

Backwards Chaining:

Start with a question – given the initial state and the rules, is the X true?

Assignment Project Exam Help

Check the data base – if X is there then it is true.

<https://powcoder.com>

Check for a rule R where X is a consequent – if there is no R then X is false.

Add WeChat powcoder

Recursively check if the antecedents of R are true.

Anatomy of An Expert System

Backwards Chaining:

•

LOW_PRESSURE

CLOUDY

COLD

IF LOW_PRESSURE & CLOUDY
THEN RAIN_LIKELY

IF HIGH_PRESSURE & NOT CLOUDY
THEN RAIN_UNLIKELY

Is RAIN_LIKELY true?

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

Anatomy of An Expert System

Backwards Chaining:

LOW_PRESSURE
CLOUDY
COLD

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

IF LOW_PRESSURE & CLOUDY
THEN RAIN_LIKELY

IF HIGH_PRESSURE & NOT CLOUDY
THEN RAIN_UNLIKELY

Is LOW_PRESSURE & CLOUDY true?

Anatomy of An Expert System

Backwards Chaining:

LOW_PRESSURE
CLOUDY
COLD

IF LOW_PRESSURE & CLOUDY
THEN RAIN_LIKELY

IF HIGH_PRESSURE & NOT CLOUDY
THEN RAIN_UNLIKELY

It then follows that RAIN_LIKELY is true!

Example Expert System

•The *rule base*:

- 1 SALTY AND FRIED--> GOOD
- 2 MEATY AND NO_VEGGIE--> YUMMY
- 3 MEATY AND VEGGIE AND NOT SALTY --> HEALTHY
- 4 COLD AND NOT MEATY --> YUCKY
- 5 NOT FRIED OR MEATY-->BAD

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

Forwards Chaining

- Benefits:

- Good for query intensive applications:
- Once you have derived all possible facts, querying is low cost (you can check the database many times).
- Works well with dynamic environments:
- Rules can be added to ensure that the database can be easily updated due to changes in the system state.

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

- Drawbacks:

- Excessive overheads:
Large rule base = lots of derived facts (very slow)
- Wasted computations:
Only a small subset of the derived facts may be required for the queries that are made.

Backwards Chaining

Benefits:

- On-demand inference:
Derived facts are generated when necessary.
- Optimised Performance
Only the pertinent facts are derived.

Assignment Project Exam Help

<https://powcoder.com>

Drawbacks:

Add WeChat powcoder

- Replication of reasoning:
Sometimes the same fact may be derived many times for the same state
(can be alleviated through caching)
- Loss of intermediate facts:
Often, any fact derived while checking a query is thrown away once the query is complete.

Beyond Propositional Symbols...

Experts systems can be extended to first-order logic:

- **Facts:** predicates
 - **Rules:** Inferences
 - **Inference Engine:** modus ponens (forward chaining) or resolution (backward chaining).
- <https://powcoder.com>

Example:

[Add WeChat powcoder](#)

- **Facts:**
 - $\text{Is}(\text{greg}, \text{man}), \text{is}(\text{man}, \text{human})$
 - $\text{Is}(\text{caroline}, \text{woman}), \text{is}(\text{woman}, \text{human})$
- **Rules:**
 - $\text{is}(X, Y) \text{ and } \text{is}(Y, Z) \Rightarrow \text{is}(X, Z)$
 - $\text{is}(X, Z) \text{ and } \text{is}(Y, Z) \Rightarrow \text{same}(X, Y)$
